Subject: Comments on Draft NCC Regional Profile

Here are some; there may be more:

1. I don't see (yet) a listing of habitat types and their areas by subregion. If this is not in the document, shouldn't it be there?
2. P. 43: Table 10, re: pollution at Pillar Point Harbor (and elsewhere): What about indicating known or suspected source(s) of pollution/contamination? Reason: Eg, the high coliform count at Pillar Point is in one location and comes from inland, upstream; it's not caused by the harbor. This is worth knowing, especially as there is a resource conservation district grant application to the state to pin this down and find solution(s) now being evaluated.
3. P. 48, para. 2: Specific harbors were named by the statement is general, implying that these harbors are generating problems, eg, "pollutants discharged from boat maintenance activities are some of the issues of concern in marinas". Is this a concern at Pillar Point, for example? We would say "no", but the language here implies otherwise. Should be changed.
4. P. 63, Princeton/Half Moon Bay: There is only one Port: Pillar Point Harbor, known in DFG statistics as Princeton. People apparently do land some fish along the Half Moon Bay beach, but there is no port there.

That's it for the moment.
